

K-306

Constructed from full aluminum alloy for a sturdy and safe yet lightweight design, making operation and transport easy; height is freely adjustable up to 184 cm, flexibly meeting various needs; optional dedicated carrying bag allows for easy storage and convenient portability; suitable for home theaters, conference rooms, weddings, music gatherings, and recording studios.

Anodized Finish :

Through anodized surface treatment, the metal's corrosion and wear resistance are enhanced, improving both appearance and product lifespan.

The stand features a thick tube design for enhanced stability and durability, providing increased load-bearing capacity.

The center column features a twist-tightening design for quick height adjustment and secure locking, complemented by a safety pin to enhance operational safety.

The top mount features a detachable design, allowing easy switching between installation methods to suit various usage needs.

Features a tripod base design for balanced support and stable structure, ensuring safety and stability during use.
